QUADRIS® Flowable Fungicide

SUSPENSION

COMMERCIAL

For Use in Controlling Diseases in Canola, Legume Vegetables including soybeans, Seed Corn, Potatoes, Tomatoes, Ginseng, Hazelnuts, Filberts, Sugarbeets, Coriander, Ferns of Asparagus, Spinach, Sweet and Field Corn, Carrots, Radish, Daikon, Horseradish, Rutabaga, Turnip, Garden Beet, Tobacco, Cereals and Ground Cherries.

GUARANTEE:
Azoxystrobin .........................................................250 g/L

Contains 1,2-benzisothiazolin-3-one at 0.031% as a preservative.

Label
NOTICE TO USER

This pest control product is to be used only in accordance with the directions on the label. It is an offence under the Pest Control Products Act to use this product in a way that is inconsistent with the directions on the label. The user assumes the risk to persons or property that arises from any such use of this product.

FIRST AID

IN CASE OF POISONING, contact a physician or a poison control centre IMMEDIATELY. Take container, label or product name and Pest Control Product Registration Number with you when seeking medical attention.

If swallowed, call a poison control centre or doctor IMMEDIATELY for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by a poison control centre or doctor. Do not give anything by mouth to an unconscious person.

If on skin or clothing, take off contaminated clothing. Rinse skin IMMEDIATELY with plenty of water for 15–20 minutes. Call a poison control centre or doctor for treatment advice.

If in eyes, hold eye open and rinse slowly and gently with water for 15–20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eye. Call a poison control centre or doctor for treatment advice.

TOXICOLOGICAL INFORMATION

No specific symptoms of poisoning are known for this product. If ingested, nausea, vomiting, diarrhea and abdominal pain may occur. Treat symptomatically.

PRECAUTIONS

KEEP OUT OF REACH OF CHILDREN.

May irritate eyes. Avoid contact with eyes, skin and clothing. Avoid breathing dust or spray mist. Wash with soap and water after handling, and before eating, drinking or smoking. Wash contaminated clothing, separately from household laundry, before re-use. Do not wear contaminated shoes.

Wear long-sleeved shirt and long pants when mixing, loading and applying and during clean-up and repair activities. Wear chemical resistant gloves during mixing and loading.

Do not re-enter treated fields until residues have dried.

ENVIRONMENTAL PRECAUTIONS

This product is toxic to fish and aquatic organisms.
Observe buffer zones specified in Table 1 under Directions for Use.

DO NOT apply this product directly to aquatic habitats (such as lakes, rivers, sloughs, ponds, coulees, Prairie potholes, creeks, marshes, streams, reservoirs, wetlands, estuaries and marine habitats). DO NOT contaminate irrigation or drinking water supplies or aquatic habitats by cleaning of equipment or disposal of wastes.

Azoxystrobin is persistent and will carryover. It is recommended that this product not be used in areas treated with Azoxystrobin during the previous season.

Avoid application to areas where runoff is likely to occur. Runoff from treated areas into aquatic habitats may be hazardous to aquatic organisms. To reduce runoff from treated areas into aquatic habitats, consider the characteristics and conditions of the site before treatment. Site characteristics that may lead to runoff include, but are not limited to: heavy rainfall, moderate to steep slope, bare soil, poorly draining soil (e.g. soils that are compacted or fine textured, such as clay). Avoid application of this product when heavy rain is forecast. Contamination of aquatic areas as a result of runoff may be reduced by including a vegetative strip between the treated area and the edge of the water body.

The properties of this product indicate it may leach to ground water. The use of this product may result in contamination of ground water, particularly in areas where soils are permeable (e.g. sandy soil) and/or the depth to the water table is shallow.

If this pest control product is to be used on a commodity that may be exported to the U.S. and you require information on acceptable residue levels in the U.S., visit CropLife Canada’s website at www.croplife.ca.

STORAGE

Keep in original container, tightly closed, during storage. Store in a cool, dry, well ventilated area away from feed and foodstuffs, and out of the reach of children and animals. Do not store below 0°C.

SPILL CLEANUP

Wear appropriate protective equipment (gloves, glasses, apron) when attempting to clean up the spill. If the container is leaking, secure leak and place the container into a drum or heavy gauge plastic bag. Contact Syngenta Crop Protection Canada, Inc. (See EMERGENCY NUMBER) for further information.

For spills and leaks - contain the liquid with dikes of inert material (soil, clay, kitty litter, etc.). Absorb the spill onto inert material and shovel into a sealable waste container.

On hard surfaces - sprinkle spill area with detergent and scrub in a small quantity of water with a coarse broom. Let stand 10 minutes then absorb onto an inert material and shovel into the waste container.

On soil - remove the top 15 cm of soil in the spill area and replace with fresh soil. Dispose of all waste including scrub brush in accordance with provincial requirements.
DISPOSAL OF UNUSED, UNWANTED PRODUCT

For information on disposal of unused, unwanted product, contact the manufacturer or the provincial regulatory agency. Contact the manufacturer and the provincial regulatory agency in case of a spill, and for clean-up of spills.

CONTAINER DISPOSAL:

For recyclable containers:  
Do not reuse this container for any purpose. This is a recyclable container, and is to be disposed of at a container collection site. Contact your local distributor/dealer or municipality for the location of the nearest collection site. Before taking the container to the collection site:

1. Triple- or pressure-rinse the empty container. Add the rinsings to the spray mixture in the tank.  
2. Make the empty, rinsed container unsuitable for further use.

If there is no container collection site in your area, dispose of the container in accordance with provincial requirements.

IN CASE OF EMERGENCY INVOLVING A MAJOR SPILL, FIRE OR POISONING, CALL 1-800-327-8633 (FASTMED)

**CALL 1-800-327-8633 (FASTMED)**

PRODUCT INFORMATION

QUADRIS Flowable Fungicide is a broad spectrum, preventative fungicide with systemic properties recommended for the control of plant diseases of canola, legume vegetables including soybeans, seed corn, potatoes, tomatoes, ginseng, hazelnuts, filberts, sugarbeets, coriander, ferns of asparagus, spinach, sweet and field corn, carrots, radish, daikon, horseradish, rutabaga, turnip, garden beet, tobacco, cereals and ground cherries.

QUADRIS Flowable Fungicide is to be applied as a foliar spray. Optimum disease control will be obtained by protective treatments prior to disease establishment. Refer to the specific use directions for each crop for detailed instructions on rates, application timing and technique.

Do not apply QUADRIS Flowable Fungicide through irrigation equipment.
DIRECTIONS FOR USE

**CANOLA**

</thead>
<tbody>
<tr>
<td>Alternaria Black Spot (<em>Alternaria brassicae, Alternaria raphani</em>)</td>
<td>700-1000</td>
<td>Early bloom stage (prior to 30% bloom)</td>
<td>One (1) litre of QUADRIS Flowable Fungicide will treat 1 to 1.4 hectares.</td>
</tr>
</tbody>
</table>

Restrictions: The PHI for application of QUADRIS Flowable Fungicide on canola is 30 days. A plant back interval of 30 days for broadleaf and root crops, and of 45 days for cereals is required. QUADRIS Flowable Fungicide is not a substitute for good management practices. For optimum control of Blackleg, plant seed treated with a seed treatment recommended for the control of seed borne Blackleg, followed by a foliar application of QUADRIS Flowable Fungicide.

**LEGUMES VEGETABLES (Crop Group 6) INCLUDING SOYBEANS**

**Crop Group 6A: Edible-podded legume vegetables** - Any succulent cultivar of edible podded bean (*Phaseolus* spp.) and any succulent cultivar of edible-podded pea (*Pisum* spp.). Bean (*Phaseolus* spp.) (includes runner bean, snap bean, wax bean); bean (*Vigna* spp.) (includes asparagus bean, Chinese longbean, moth bean, yardlong bean); jack bean; pea (*Pisum* spp.) (includes dwarf pea, edible-podded pea, snow pea, sugar snap pea); pigeon pea; soybean (immature seed); and sword bean.

**Crop Group 6B: Succulent shelled pea and bean** - Any succulent shelled cultivar of bean (*Phaseolus* spp.) and garden pea (*Pisum* spp.); bean (*Phaseolus* spp.) (includes lima bean, green bean); broad bean (succulent); bean (*Vigna* spp.) (includes black-eyed pea, cowpea, southern pea); pea (*Pisum* spp.) (includes English pea, garden pea, green pea); and pigeon pea.

**Crop Group 6C: Dried shelled pea and bean** - Any dried cultivar of bean (*Phaseolus* spp.); and dried cultivar of pea (*Pisum* spp.); dried cultivars of bean (*Lupinus* spp.) (includes grain lupin, sweet lupin, white lupin, and sweet white lupin); (*Vigna* spp.) (includes adzuki beans); (*Phaseolus* spp.) (includes field bean, kidney bean, lima bean (dry), navy bean, pinto bean, tepary bean, mung bean, rice bean, southern bean, urd bean); broad bean (dry); chickpea; guar; lablab bean; lentil; pea (*Pisum* spp.) (includes field pea); and pigeon pea.

<td>Any commodity listed under Crop Group 6C - the dried shelled pea and bean sub-group.</td>
<td>500 mL</td>
<td>The first application must be applied before disease is established and no later than the onset of flowering. A second application can be made 10-14 days after the first application, when disease pressure is severe or when agronomic or weather conditions are conducive to disease development or movement.</td>
</tr>
</tbody>
</table>

**Restrictions:** APPLY A MAXIMUM OF 2 APPLICATIONS OF QUADRIS FLOWABLE FUNGICIDE PER SEASON. DO NOT APPLY WITHIN 15 DAYS OF HARVEST. A plant back interval of 30 days for broadleaf and root crops, and of 45 days for cereals is required. Do not exceed more than 2 applications of QUADRIS Flowable Fungicide per hectare per season. Not all members of the legume vegetable group have been tested for efficacy and phytotoxicity at the recommended label rates, and should be used at the discretion of the user. Do not feed dried pea vines to livestock.
### QUADRIS FLOWABLE FUNGICIDE TANK MIXED WITH TILT 250E FUNGICIDE

#### LEGUMES VEGETABLES (Crop Group 6) INCLUDING SOYBEANS

<table>
<thead>
<tr>

<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Asian (Soybean) Rust (Phakopsora pachyrhyizi)</td>
<td>All Crop Group 6A, B, C legumes vegetables listed above, and soybeans</td>
<td>0.3 - 0.45 L/ha of QUADRIS Flowable Fungicide with 0.5 – 0.75 L/ha of TILT 250E Fungicide</td>
<td>Make the first application at the first sign of disease. Apply the high rate only under conditions of high disease pressures. A second application at 14 days interval may be needed if conditions persist. It is important to protect the developing pod of soybean and podded legume vegetables. Good spray coverage and canopy penetration are important for best results. Apply in a minimum of 45 L of water per hectare.</td>
</tr>
</tbody>
</table>

**Restrictions:** DO NOT APPLY MORE THAN 2 APPLICATIONS OF QUADRIS FLOWABLE FUNGICIDE PER SEASON. DO NOT APPLY MORE THAN 2 APPLICATIONS OF TILT 250E FUNGICIDE PER SEASON. Do not apply within 30 days of harvest for crop subgroup 6C (dry legume vegetables) and soybeans. Do not apply within 15 days of harvest for crop subgroup 6A (edible podded legume vegetables) and 6B (succulent shelled legume vegetables). Do not make more than one application to soybean hay and dry pea hay. Do not apply within 14 days of harvest of soybean hay and dry pea hay. Do not feed dried pea vines to livestock. Not all members of the legume vegetable group have been tested for efficacy and phytotoxicity at the recommended label rates and this tank mix should be used at the discretion of the user. The tank mix of QUADRIS Flowable Fungicide plus TILT 250E Fungicide may be applied by air or ground application equipment.

### QUADRIS FLOWABLE FUNGICIDE TANK MIX WITH MATADOR® 120EC INSECTICIDE OR WARRIOR INSECTICIDE

#### LEGUMES VEGETABLES (CROP GROUP 6) INCLUDING SOYBEANS

QUADRIS Flowable Fungicide can be tank mixed with MATADOR 120EC Insecticide or WARRIOR Insecticide for common leaf rust and insect control. Apply QUADRIS Flowable Fungicide at a rate of 500 mL/ha in a tank mix with MATADOR 120EC Insecticide or WARRIOR Insecticide at a rate of 83-233 mL/ha for control of soybean aphid on soybean and at a rate of 83mL/ha for the rest of the crops in Crop Group 6. Refer to the QUADRIS Flowable Fungicide, MATADOR 120EC Insecticide and WARRIOR Insecticide labels for diseases and insects controlled, specific application instructions and precautions. Pests and crops must be at the correct stage as specified on the QUADRIS Flowable Fungicide, MATADOR 120EC Insecticide as well as on WARRIOR Insecticide label. DO NOT apply more than 2 applications per season of this tank mix. DO NOT make more than one application to soybean hay and dry pea hay per season of this tank mix. PHI 30 days for crop subgroup 6C (dry legume vegetables) and soybeans. PHI 15 days for crop subgroup 6A (edible podded legume vegetables) and 6B (succulent shelled legume vegetables). DO NOT apply within 14 days of harvest of soybean hay and dry pea hay. A plant back interval of 30 days for broadleaf and root crops, and of 45 days for cereals is required for this tank mix. DO NOT feed dried pea vines to livestock. DO NOT graze or harvest treated forage, straw or hay for livestock feed. Not all members of the legume vegetable group have been tested for efficacy and phytotoxicity at the recommended label rates, and should be used at the discretion of the user. This tank mix can be applied by ground application equipment only. DO NOT APPLY THE TANK MIX WITH MATADOR 120EC Insecticide OR WARRIOR Insecticide BY AIR.
### POTATOES

<table>
<thead>
<tr>
<th>Diseases Controlled</th>
<th>Product Rate (mL/ha)</th>
<th>Application Timing</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Early Blight</td>
<td>500 - 800</td>
<td>Apply on a 7 to 14 day interval, starting prior to disease establishment.</td>
<td>Apply as a broadcast foliar spray in sufficient water for thorough coverage. Use the higher rate if extending the treatment interval to 14 days. Apply in alternation with fungicides which have a different mode of action, and to which disease resistance has not developed. For Early Blight, use the high rate and short application interval under high disease pressures. If Late Blight becomes established, discontinue use of QUADRIS Flowable Fungicide, and use alternative fungicides.</td>
</tr>
<tr>
<td>Late Blight</td>
<td>800</td>
<td>Apply on a 7 day interval, starting prior to disease establishment</td>
<td></td>
</tr>
</tbody>
</table>
**QUADRIS FLOWABLE FUNGICIDE TANK MIXED WITH BRAVO® 500 FUNGICIDE**

QUADRIS Flowable Fungicide can be tank mixed with BRAVO 500 Fungicide for Early Blight (*Alternaria solani*) control on potatoes. Apply QUADRIS Flowable Fungicide at a rate of 500 ml /ha in tank mix with BRAVO 500 Fungicide at a rate of 2L /ha.

- Read all the labels and follow the precautionary statement, directions for use (rates, diseases controlled and application intervals) and other restrictions.
- Always check the compatibility of QUADRIS Flowable Fungicide tank mix using a jar test with proportionate amounts of BRAVO 500 Fungicide, and the water, before mixing in the spray tank.
- Provide sufficient jet or mechanical agitation during filling and application to keep the tank mix uniformly suspended.
- Fill tank at least 1/2 full of clean water.
- Add first BRAVO 500 Fungicide then QUADRIS Flowable Fungicide next.
- Do not leave tank mix combinations in the spray tank for prolonged periods without agitation. Mix and apply in the same day.
- This tank mix can be applied by ground only. Use minimum of 100 L of water per hectare when applying by ground.

Apply on a 7 to 14 day interval, starting prior to disease development. Use the short application interval under high disease pressures.

Apply as a broadcast foliar spray in sufficient water for thorough coverage.

**Restrictions:** Do not apply sequential treatments of BRAVO 500 Fungicide tank mixed with QUADRIS Flowable Fungicide. DO NOT apply to potato plants later than 2 days before harvest.

Follow recommendations provided by local disease monitoring services or provincial spray calendars regarding the appropriate application timing for protectant fungicides in your area. Cultural practices such as canopy management and removal of overwintered plant debris should be integrated with the use of fungicides to reduce disease incidence. Use the higher rate, and the shorter application interval under conditions of heavy infection pressure, on highly susceptible varieties, or when environmental conditions are favourable for disease development.

Do not exceed more than 3 applications per hectare per season.

A plant back interval of 30 days for potatoes (root crops) is required.

DO NOT APPLY BY AIR
**POTATOES – IN-FURROW APPLICATION**

**Mixing Instructions:**

1. Fill tank at least 1/2 full of clean water.
2. With the agitator running, add QUADRIS Flowable Fungicide and ACTARA 240SC Insecticide, followed by RIDOMIL GOLD 480SL Fungicide (or RIDOMIL GOLD 480EC Fungicide).
3. Continue filling the spray tank with water until the desired volume is reached.
4. Begin application of the solution after the products have completely dispersed into the mix water. Maintain agitation until all of the mixture has been applied.

**Precautions:**

Read the labels for all products in the tank-mix and follow the precautionary statements, directions for use (rates, diseases controlled and application intervals) and other restrictions.

Always check the compatibility of the QUADRIS Flowable Fungicide tank-mix using a jar test with proportionate amounts of RIDOMIL GOLD 480SL Fungicide (or RIDOMIL GOLD 480EC Fungicide), ACTARA 240SC Insecticide and water before mixing in the spray tank.

Provide sufficient jet or mechanical agitation during filling and application to keep the tank mix uniformly suspended.

Do not leave tank mix combinations in the spray tank for prolonged periods without agitation. Mix and apply in the same day.

Do not follow a soil application of ACTARA 240SC Insecticide with a foliar application of ACTARA 25WG Insecticide.

A plant back interval of 30 days for potatoes (root crops) is required.

Do not apply within 90 days of harvest. Do not apply more than one application per season.

**Specific Use Restrictions:** Do not make more than one application per season of this tank mixture. An additional application of TILT 250E Fungicide can be made, if required. Refer to the TILT 250E Fungicide label for details of the rate and timing. A total of two applications of TILT 250E Fungicide should be applied per season either in a tank mix with QUADRIS Flowable Fungicide or alone. Do not apply within 45 days of harvest for grain and straw. Do not harvest wheat for forage. Do not graze or feed livestock treated forage or cut green crop for hay or silage. The tank mix of QUADRIS Flowable Fungicide and TILT 250E Fungicide may be applied with ground or air equipment. GROUND APPLICATION: Apply specified rates in a minimum of 100 L of water per hectare. AERIAL APPLICATION: Apply specified rates in a minimum of 45 L of water per hectare.
<table>

</table>
| Field corn  
Sweet Corn (including Seed Production)  
Popcorn (including Seed Production) | Rust (*Puccinia sorghi*)  
Northern Corn Leaf Blight (*Setosphaeria turcicum*)  
Southern Corn Leaf Blight (*Cochliobolus heterostrophus*)  
Eye Spot (*Aureobasidium zeae*)  
Grey Leafspot (*Cercospora zeae-maydis*) | 0.225 - 0.3 L/ha of QUADRIS Flowable Fungicide with 0.5 L/ha of TILT 250E Fungicide | Make first application at the first sign of disease, followed by a second application 14 days after the first, if environmental conditions are favourable for disease development. Good spray coverage and canopy penetration are important for best results. Use the low rate of QUADRIS under low to moderate disease pressure. Use the high rate of QUADRIS only under conditions of severe disease pressure. |

**Specific Use Restrictions:** A maximum of two applications of QUADRIS Flowable Fungicide and a maximum of two applications of TILT 250E Fungicide should be applied per season either as a tank mix or as products applied alone. Do not apply to field corn and field corn grown for seed after brown silk. Do not apply within 30 days of harvest for forage. Do not apply to sweet corn within 14 days of harvest. Not all of these cereal crops have been tested for efficacy and phytotoxicity at the recommended label rates and the tank mix of QUADRIS Flowable Fungicide and TILT 250E Fungicide should be used at the discretion of the user. The tank mix of QUADRIS Flowable Fungicide and TILT 250E Fungicide may be applied with ground or air equipment.

**GROUND APPLICATION:** Apply specified rates in a minimum of 100 L of water per hectare.

**AERIAL APPLICATION:** Apply specified rates in a minimum of 45 L of water per hectare.

### FIELD TOMATOES ONLY

<table>
<thead>
<tr>
<th>Diseases Controlled</th>
<th>Product Rate (mL/ha)</th>
<th>Application Timing</th>

</tr>
</thead>
</table>
| Anthracnose  
(*Colletotrichum coccodes*) | 300 - 500 | Apply on a 7 to 10 day interval, starting at first fruit set. | Apply as a broadcast foliar spray in sufficient water for thorough coverage.  
Use the higher rate if extending the treatment interval to 14 days. |
| Early Blight  
(*Alternaria solani*) | 300 - 500 | Apply on a 7 to 14 day interval, starting prior to disease establishment. | Apply in alternation with fungicides which have a different mode of action, and to which disease resistance has not developed. |

**Restrictions:** Do not apply more than 1.5 L of QUADRIS Flowable Fungicide per hectare per crop per season. Do not exceed more than 3 applications of QUADRIS Flowable Fungicide per season. Do not apply sequential treatments of QUADRIS Flowable Fungicide. The PHI for application of QUADRIS Flowable Fungicide is 1 day. To avoid damage to tomatoes, QUADRIS Flowable Fungicide should not be applied within 6 days, either before or after, a broadcast application of metribuzin. Follow all precautions, restrictions and directions on the labels of fungicide products used in an alternation program.

QUADRIS Flowable Fungicide should not be applied until 21 days after transplanting or 35 days after seeding.
QUADRIS FLOWABLE FUNGICIDE TANK MIXED WITH MATADOR 120EC INSECTICIDE OR WARRIOR INSECTICIDE:

SEED CORN, SWEET CORN AND FIELD CORN

QUADRIS Flowable Fungicide can be tank mixed with MATADOR 120EC Insecticide or WARRIOR Insecticide for common leaf rust (Puccinia sorghi) and insect control on seed, field and sweet corn. Apply QUADRIS Flowable Fungicide at a rate of 453 mL/ha in a tank mix with MATADOR 120EC Insecticide or WARRIOR Insecticide at a rate of 83mL/ha. Refer to QUADRIS Flowable Fungicide, MATADOR 120EC Insecticide and WARRIOR Insecticide labels for diseases and insects controlled, specific application instructions and precautions. Crops and insects must be at the correct stage as specified on the QUADRIS Flowable Fungicide label, MATADOR 120EC insecticide label and WARRIOR Insecticide label.

The tank mix of QUADRIS Flowable Fungicide with MATADOR 120EC Insecticide can be applied by ground or air. The tank mix of QUADRIS Flowable Fungicide with WARRIOR Insecticide may be applied by ground only. Use 200 L of water per hectare when applying by ground. Use 45 L of water per hectare when apply by air.

This tank mix is not registered for use on popcorn.

Do not harvest treated corn within 14 days of this tank-mix.

Do not make more than 2 applications per year.

Compatibility should always be confirmed by premixing small proportional quantities of water, QUADRIS Flowable Fungicide and the tank-mix partners in advance.

GROUND APPLICATION

Do not apply QUADRIS Flowable Fungicide through irrigation equipment.

Do not apply during periods of dead calm or when winds are gusty. Do not overspray non-target terrestrial or aquatic habitats. Do not contaminate aquatic habitats when cleaning and rinsing spray equipment and containers. Do not apply with spray droplets smaller than the ASAE medium classification. Apply using nozzle tips and in sufficient water volume for thorough coverage (i.e. at least 100 litres per hectare). Higher water volumes may be necessary to provide adequate coverage in thick crop canopies.

Buffer zones as specified in the Table 1 (below) are required between the downwind point of direct application and the closest edge of sensitive aquatic habitats (such as lakes, rivers, sloughs, ponds, coulees, Prairie potholes, creeks, marshes, streams, reservoirs, and wetlands) and estuarine/marine habitats. Do not contaminate these habitats when cleaning and rinsing spray equipment or containers.

AERIAL APPLICATION

Do not apply during periods of dead calm or when winds are gusty. Do not overspray non-target terrestrial or aquatic habitats. Do not contaminate aquatic habitats when cleaning or rinsing spray equipment or containers. Do not apply with spray droplets smaller than the ASAE medium classification. Aerial drift is increased under certain meteorological conditions. Do not apply when wind speed is greater than 16 km/hour at flying height at the site of application. Apply in at least 45 litres of water per hectare.
Apply only by fixed-wing or rotary aircraft equipment which has been functionally and operationally calibrated for the atmospheric conditions of the area and the application rates and conditions of this label. To avoid streaked, uneven or overlapped application, use appropriate marking devices.

Apply only when meteorological conditions at the treatment site allow for complete and even crop coverage. Apply only under conditions of good practice specific to aerial application as outlined in the National Aerial Pesticide Application Manual, developed by the Federal/Provincial/Territorial Committee on Pest Management and Pesticides.

**Operator Precautions**

Do not allow the pilot to mix chemicals to be loaded onto the aircraft. Loading of premixed chemicals with a closed system is permitted.

It is desirable that the pilot have communication capabilities at each treatment site at the time of application.

The field crew and the mixer/loaders must wear chemical resistant gloves, coveralls and goggles or face shield during mixing/loading, cleanup and repair. Follow the more stringent label precautions in cases where the operator precautions exceed the generic label recommendations on the existing ground boom label.

All personnel on the job site must wash hands and face thoroughly before eating and drinking. Protective clothing, aircraft cockpit and vehicle cabs must be decontaminated regularly.

**Product Specific Precautions**

Read and understand the entire label before opening this product. If you have questions, call the manufacturer at 1-87-SYNGENTA (1-877-964-3682) or obtain technical advice from the distributor or your provincial agricultural representative. Application of this specific product must meet and/or conform to the following:

**Volume:** Apply the recommended rate in a minimum of 45 litres of water per hectare.

Do not spray when the wind is blowing towards a nearby sensitive crop, garden, terrestrial habitat (such as shelter-belt) or aquatic habitat.

Coarse sprays are less likely to drift; therefore, avoid combinations of pressure and nozzle type that will result in fine particles (mist). Do not apply with spray droplets smaller than the ASAE medium classification. Aerial drift is increased under certain meteorological conditions. Do not apply during periods of dead calm, when winds are gusty, or when wind speed is greater than 15 km/hr at 2 metres above ground at the site of application. Do not overspray non-crop terrestrial habitats. Buffer zones as specified in the Table 1 (below) are required between the downwind edge of the boom and sensitive aquatic habitats such as sloughs, ponds, Prairie potholes, lakes, rivers, streams and wetlands. Do not overspray these sensitive habitats. Do not contaminate these habitats when cleaning and rinsing spray equipment or containers.
Buffer zones:
The buffer zones specified in the table below are required between the point of direct application and the closest downwind edge of sensitive terrestrial habitats (such as grasslands, forested areas, shelter belts, woodlots, hedgerows, rangelands, riparian areas and shrublands), sensitive freshwater habitats (such as lakes, rivers, sloughs, ponds, Prairie potholes, creeks, marshes, streams, reservoirs and wetlands) and estuarine/marine habitats.

When a tank mixture is used, consult the labels of the tank-mix partners and observe the largest (most restrictive) buffer zone of the products in the tank mixture.

CAUTION: QUADRIS Flowable Fungicide has been shown to be extremely phytotoxic to certain apple and crabapple varieties. QUADRIS Flowable Fungicide should not be applied where there is the possibility of spray drift reaching apple or crabapple trees. DO NOT use sprayers used to apply QUADRIS Flowable Fungicide to spray apples or crabapples.

Follow recommendations provided by local disease monitoring services or provincial spray calendars regarding the appropriate application timing for protectant fungicides in your area. Cultural practices such as canopy management and removal of overwintered plant debris should be integrated with the use of fungicides to reduce disease incidence. Use the higher rate, and the shorter application interval under conditions of heavy infection pressure, on highly susceptible varieties, or when environmental conditions are favourable for disease development.
QUADRIS Flowable Fungicide treatments should be integrated into an overall disease management strategy that includes selection of varieties with disease tolerance, plant residue management, crop rotation, and proper timing and placement of fertilizer and irrigation. Fungicide applications should begin prior to disease infection and continue throughout the season following a resistance management strategy (see Resistance-Management Recommendations).

**General Mixing Instructions:** Partially fill the spray tank with clean water and begin agitation. Add the specified amount of QUADRIS Flowable Fungicide to the tank. Finish filling the tank to the desired volume to obtain the required spray concentration, maintain agitation. Maintain agitation throughout the spraying operation. If the spray mixture is left to stand for a prolonged period (ie. overnight), vigourous agitation will be required to resuspend the fungicide.

**READ THE FOLLOWING BEFORE USING THIS PRODUCT FOR THE INDICATED SPECIAL USE APPLICATIONS**

**NOTE TO USER:**
The DIRECTIONS FOR USE for this product for the uses described below were developed by persons other than Syngenta Crop Protection Canada, Inc. and accepted for registration by Health Canada under the User Requested Minor Use Label Expansion program. Syngenta Crop Protection Canada, Inc. itself makes no representation or warranty with respect to performance (efficacy) and crop tolerance (phytotoxicity) claims for this product when used on the crops listed below.

Accordingly, the Buyer and User assume all risks related to performance and crop tolerances arising, and agree to hold Syngenta Crop Protection Canada, Inc. harmless from any claims based on efficacy or phytotoxicity in connection with the uses described below.

Restrictions:

(1) Apply by ground application.

(2) Apply QUADRIS Flowable Fungicide in sufficient water volume for adequate coverage and canopy penetration.

(3) DO NOT apply more than one application of QUADRIS Flowable Fungicide or other Group 11 fungicides before alternation with a fungicide that is not from Group 11.

(4) QUADRIS may enhance weather flecking on the leaves of certain tobacco types. This does not affect yield and quality.

(5) DO NOT tank mix with THIODAN. Tank mixing with insecticides formulated as ECs or containing high amounts of solvents may cause some crop injury.
## CHICKPEAS DISEASES CONTROLLED

<table>
<thead>
<tr>
<th>Product</th>
<th>Rates (L/HA)</th>
<th>Application Timing</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>QUADRIS Flowable Fungicide + BRAVO 500 Agricultural Fungicide</td>
<td>0.5 + 2 – 4*</td>
<td>The first application must be applied before disease is established and no later than the onset of flowering. A second application can be made 10-14 days after the first application, when disease pressure is severe or when agronomic or weather conditions are conducive to disease development.</td>
<td>Apply in 220 L of water per hectare. Do not apply sequential treatments of BRAVO 500 Agricultural Fungicide tank mixed with QUADRIS Flowable Fungicide. Follow recommendations provided by local disease monitoring services or provincial spray calendars regarding the appropriate application timing for protectant fungicides in your area. Cultural practices such as canopy management and removal of overwintered plant debris should be integrated with the use of fungicides to reduce disease incidence. Use the higher rate, and the shorter application interval under conditions of heavy infection pressure, on highly susceptible varieties, or when environmental conditions are favourable for disease development.</td>
</tr>
</tbody>
</table>

* For the first application use 3 - 4 L/ha BRAVO 500 tank mixed with 0.5 L/ha QUADRIS Flowable Fungicide and for the second application use 2 - 3 L/ha BRAVO 500 tank mixed with 0.5 L/ha QUADRIS Flowable Fungicide

**Restrictions:**

1. Do not apply more than 2 applications of the tank mix per season.
2. A plant-back interval of 30 days for broadleaf and root crops, and of 45 days for cereals is required.
3. DO NOT APPLY BY AIR.
For Resistance management, please note that QUADRIS Flowable Fungicide contains a Group 11 fungicide. Any fungal population may contain individuals naturally resistant to QUADRIS Flowable Fungicide and other Group 11 fungicides. A gradual or total loss of pest control may occur over time if these fungicides are used repeatedly in the same fields. Other resistance mechanisms that are not linked to site of action but specific for individual chemicals, such as enhanced metabolism, may also exist. Appropriate resistance-management strategies should be followed.

**To delay fungicide resistance:**

Where possible, rotate the use of QUADRIS Flowable Fungicide or other Group 11 fungicides with different groups that control the same pathogens.

Do not exceed the total number of applications of QUADRIS Flowable Fungicide per season per crop as stated in Table 2.
Do not apply sequential treatments of QUADRIS Flowable Fungicide, or other fungicides in the same Fungicide Group, in a season. Do not apply at rates lower than recommended on the label. Use tank mixtures with fungicides from a different group when such use is permitted.

Fungicide use should be based on an IPM program that includes scouting, historical information related to pesticide use and crop rotation and considers cultural, biological and other chemical control practices.

Monitor treated fungal populations for resistance development.

If disease continues to progress after treatment with this product, do not increase the use rate. Discontinue use of this product, and switch to another fungicide with a different target site of action, to which pathogen resistance has not developed.

Contact your local extension specialist or certified crop advisors for any additional pesticide resistance-management and/or IPM recommendations for specific crops and disease problems in your area.
