“Bone Meal Information”

All Bone meal produced by Enviro Granulation is sourced from numerous rendering facilities that are inspected and monitored by CFIA or the USDA, Food Safety Inspection Services (FSIS). The suppliers regulate and process through either of the following processes:

A) **“Bovine”** bone meal facilities only use raw materials that originate from animals that passed ante and post-mortem inspection and confirmed that the raw materials are free of SRMs.

All products are free of specified risk materials(SRMs) including the skull, brain, trigeminal ganglia (nerves attached to the brain), eyes, tonsils, spinal cord and dorsal root ganglia (nerves attached to the spinal cord) of cattle aged 30 months or older; and the distal ileum (portion of the small intestine) of cattle of all ages.

B) **“Non-Bovine”** bone meal is produced with bone meal / meat meal from porcine and or avian meals.

C) **“Bone meal”** is processed in facilities approved and monitored by CFIA as follows: Carcasses are rendered and cooked where the fat is harvested. The meat and bone meal (MBM) then goes through a 2 hour process where it is incinerated / agitated at temperatures exceeding 950 °C (1,742 °F) and deposited into a sealed bin, in which, it is detained, lab tested and confirmed and released by CFIA.

This bone meal is no longer considered as a banned (prohibited material) or SRM by the CFIA and can be valued as bone powder. Indications and warnings relating to prohibited substances and the keeping of records of sales are therefore not required.

According to the *Health of Animals Regulations Section 162*

(2) Prohibited material that has been treated in a manner approved by the Minister to inactivate the agents that cause transmissible spongiform encephalopathies is no longer prohibited material.

If there are any questions please call us.

Sincerely

Willis Horst - President
