

Shake Down®

Antifoaming Agent

GENERAL DESCRIPTION

Shake Down® eliminates unwanted foaming in spray applications involving recirculating sprayers and other high agitation equipment.

It is very important to avoid foam in your tank in order to have an even distribution of your pesticide in the tank and throughout your spray equipment. By eliminating foam, you will assure an even spray application.

Shake Down is completely innocuous to chemicals and won't clog your spray nozzles either.

Shake Down is compliant for use as a spray adjuvant under 40 CFR 180.1001 (c) at labeled rates.

DIRECTIONS FOR USE

For best results, add Shake Down to solution prior to foaming. If foam already exists, add Shake Down until foam is eliminated.

RECOMMENDED RATES

Always use the rate on the label. You can increase the rate according to the amount of foam in your tank.

Usage Rates

0.5-1 oz. Shake Down / 100 gal. spray solution
(15-30 mil) (378 L)

ACTIVE INGREDIENT

Polydimethylsiloxane

PACKAGING

12x1 quarts

Shake Down® is a registered trademark of Becker Underwood.
